

# Directed Reading Program

The Directed Reading Program is a one-to-one mentoring program between graduate and undergraduate students working on a reading project in mathematics, which is extracurricular (does not count for credit/no tuition). We encourage students from all majors and with all levels of mathematical background to apply

When you register to the program as an undergraduate student, you can specify a topic of interest. You will then be paired with a graduate student mentor, either with similar interests, or with someone who has a suggested project for you. During the semester, you will have weekly reading assignments as well as a weekly meeting with your mentor. At the end of the semester, all the undergraduate students participating in the Directed Reading Program give a presentation on what they read during the semester.

The goal of the program is to give undergraduate students an opportunity to study a topic in more detail and with more individual attention than it is possible in a classroom setting, to give undergraduate students experience explaining mathematical concepts in conversations and presentations, and to increase interaction between undergraduate and graduate students in the math department.

Apply until Wednesday, January 23th on <https://sites.google.com/view/utahdrp>
